The Tube is a theatre for one performance. The Tube can be placed indoors or outdoors.

### Target audience

The scenes are aimed at adults. It may also be possible for a younger audience occasionally, but the performance is not specifically aimed at children. The scenes last 2 minutes each. There are different little stories that we can show depending on the audience and the kind of venue and possible festival theme.

The standard performing time is 4 hours in which we do about 4 sets of 45 minutes.

In the original version the audience will have to pay to view a scene. This is part of the performance. The standard amount is €2,00 but can this be adapted after mutual consultation with the festival or theatre.

We provide a contactless card payment.

### Sizes

The dimensions of the Tube itself: Long: 2.90 m x Wide 0.70 m x High 1.70 m.

Performing area at least 4.50 wide x 3.00 deep excluding red carpet for the queue.

This carpet is 9 meters long and divided into 1,50 m sections.

Please email us a few photos of the situation or send them via WhatsApp

### Inside or outside

A quiet space is recommended.

The tube itself makes a modest sound, so for the best experience it is nice if there is no noise around. A sheltered location or indoor location is best. Outdoors it should be an area that is not too windy. In case of hot weather, we will need a shaded location.

In case of uncertain weather, it is wise to provide an alternative indoor location.

### Mobile.

The Tube is mobile and can go through a normal door but is not very maneuverable. So a route with short turns or stairs is difficult. Optionally, a part can be disassembled, but that would take a lot of time and effort, so we'd rather avoid that. Please consult in case of a difficult access. To perform on different location within one day is possible not advisable because the time to disassemble, move to the next location and reassemble is time that we cannot perform of course.

### **Assistants**

If large crowds are expected, it may be necessary to deploy one or more public supervisors to guide the public flow. It is nice to have a contact person who we can approach in case of problems or questions and who can pay attention to The Tube during the breaks.

### **Power and sound.**

The Tube is self supporting. Everything is battery operated and we use a small bluetooth speaker for the sound. We may need an electric outlet to charge batteries in between sets.

### **Set-up time**

We drive the Tube out of the van and it is almost ready to perform. We need some time however to choose the right place, unroll the red carpet and prepare all props, but within an hour of arrival we normally can play. This also depends on the time it takes to park.

### **Parking space for the van**

If you want to provide a good parking space for the company van: Sizes Long 5m50 wide 2.00m. high 2.60m (so does not fit in a parking garage ...!)
